

DEBASOFT BA

Electrolyte stable, light fast synthetic softening auxiliary.

Descriptive properties

Composition	: Sulphated fatty alcohol derivatives
Appearance	: Clear liquid
pH (1:10)	: App. 7,0
Charge	: Anionic
Solubility in water	: Easily soluble in cold and warm water
Stability	: Stable to electrolytes, mineral tanning agents, acids and bases under normal tannery conditions.
Storage	: App. 2 years - dry storage-

Debasoft BA imparts even fat distribution through the cross section of the leather. In the production of soft, light chrome leather with good tear strength, combined with or alone one can use it during soaking, degreasing, pickling, rewetting, chrome tanning and fatliquoring.

When Debasoft BA is added to soaking baths thanks to its fat dissolving and distributing capacity soaking and washing is greatly improved. When added to degreasing and washing baths Debasoft BA improves degreasing and much clearer pelts are obtained.

In rewetting of vegetable, wet white or chrome tanned leather shaving residues and other dirt are easily washed off and rewetting thorough out the cross section is assured.

As a part of the fat liquor mix Debasoft BA acts as an emulsion stabilizer and creates a synergistic softening effect. The leathers show mild touch and good tear resistance and the grain tightness is not affected.

Remarks

The well-stirred fat mixture should be added to 3 times the quantity of water at 50°C.

The product may separate under extreme cold or warm storage conditions.

Before use, mix by stirring, pump circulation or any other suitable method below 15°C / -25°C.

Packaging

200 kg In polypropylene drums.
