

DEBAZYM 7

Softening auxiliary enriched with an enzyme blend for very soft, fluffy, low density nappa leather types with silky touch.

Descriptive properties

Composition	: Softening esters mix with an enzyme blend
Appearance	: Yellowish brown
pH (1:10)	: 7,0 – 9,0
Charge	: Anionic
Solubility in water	: Fully miscible
Stability	: Stable to electrolytes under normal tannery conditions
Storage	: Minimum 1 year - dry storage-

Debazym 7 has been developed to be used either as a single fatliquor or in combination with all anionic fatliquors from the Debasoft range for extreme soft and fluffy nappa types with a silky touch.

Debazym 7 imparts to the leather extraordinary softness and very good fiber lubrication resulting fine grain and lightweight nappa leather with silky touch.

Remarks

The well-stirred fat mixture should be added to 3 times the quantity of water at 60°C.

The product may separate under extreme cold or warm storage conditions.

The product should not be stored at temperatures higher than 45°C and should be protected from direct sunlight.

Before use, mix by stirring, pump circulation or any other suitable method at 15°C / -25°C.

For further information please refer to its MSDS.

Packaging

145 kg in polypropylene drums.
